

Appendix B: Mansfield District Moving Communities Maps

Areas of Deprivation

The majority of the deprivation in Mansfield is in the north of the district, the west and central areas and the southeast. The central most deprived areas are surrounded by areas which are significantly less deprived, located within the district's main urban area.

Percentage of Active Adults by LSOA and Facilities

Given there are far fewer facilities in the north of the district, recorded levels of active adults here are extremely low. Highest levels of activity are in the central area, where key facilities are located such as local authority leisure centres, accessible education sites and commercial health and fitness gym and swimming pools.

Active Adults (%) by LSOA

Mansfield District Council

Built Facility Assessment and Strategy 2023 - 2043

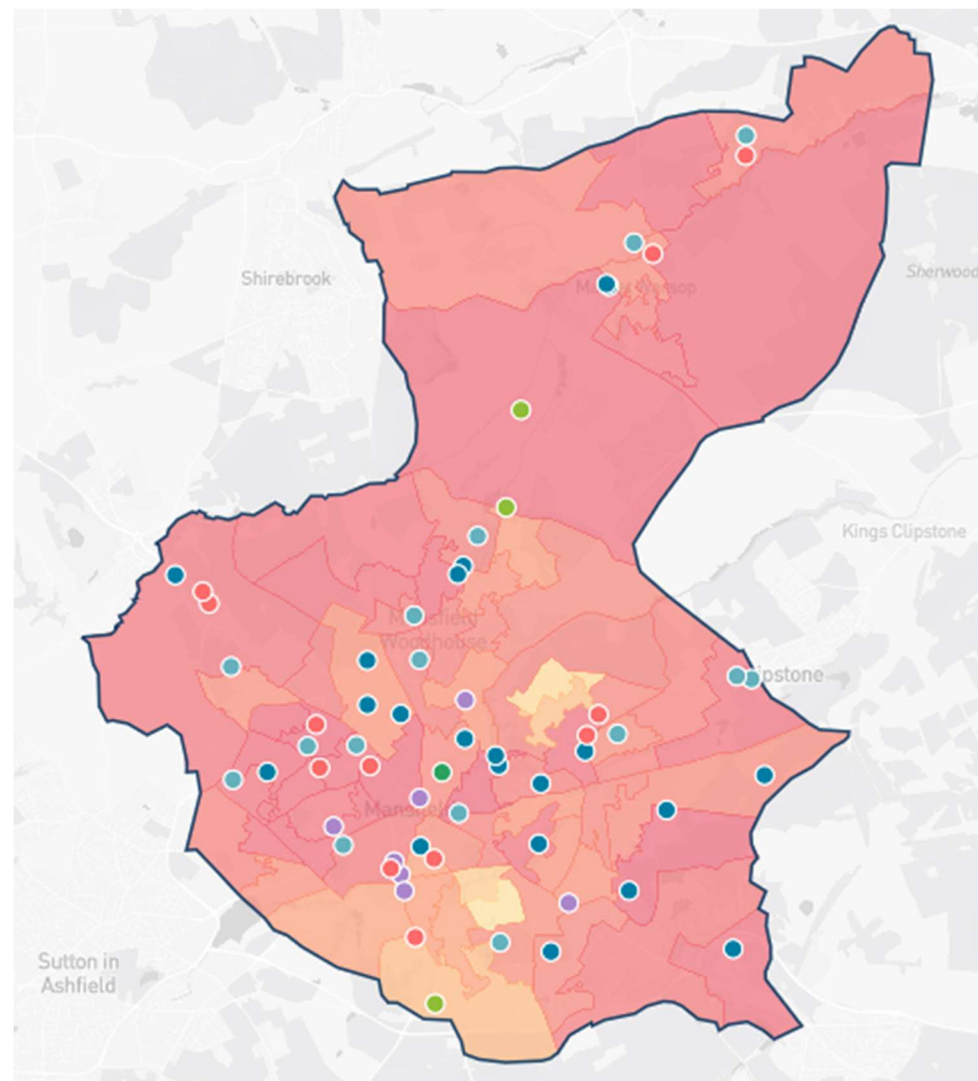

Percentage of Inactive Adults by LSOA and Facilities

Lowest activity levels amongst adults are in the north, west and eastern areas of the district. The rurality of the north means residents need to travel further to access facilities, presenting a barrier to participation. Facilities in the far east and west of the district provide limited physical activity opportunities as they are either education sites, small activity halls or sport specific sites.
